Why Feature Updates?

Windows 10

Minimize Time System is Unavailable to User

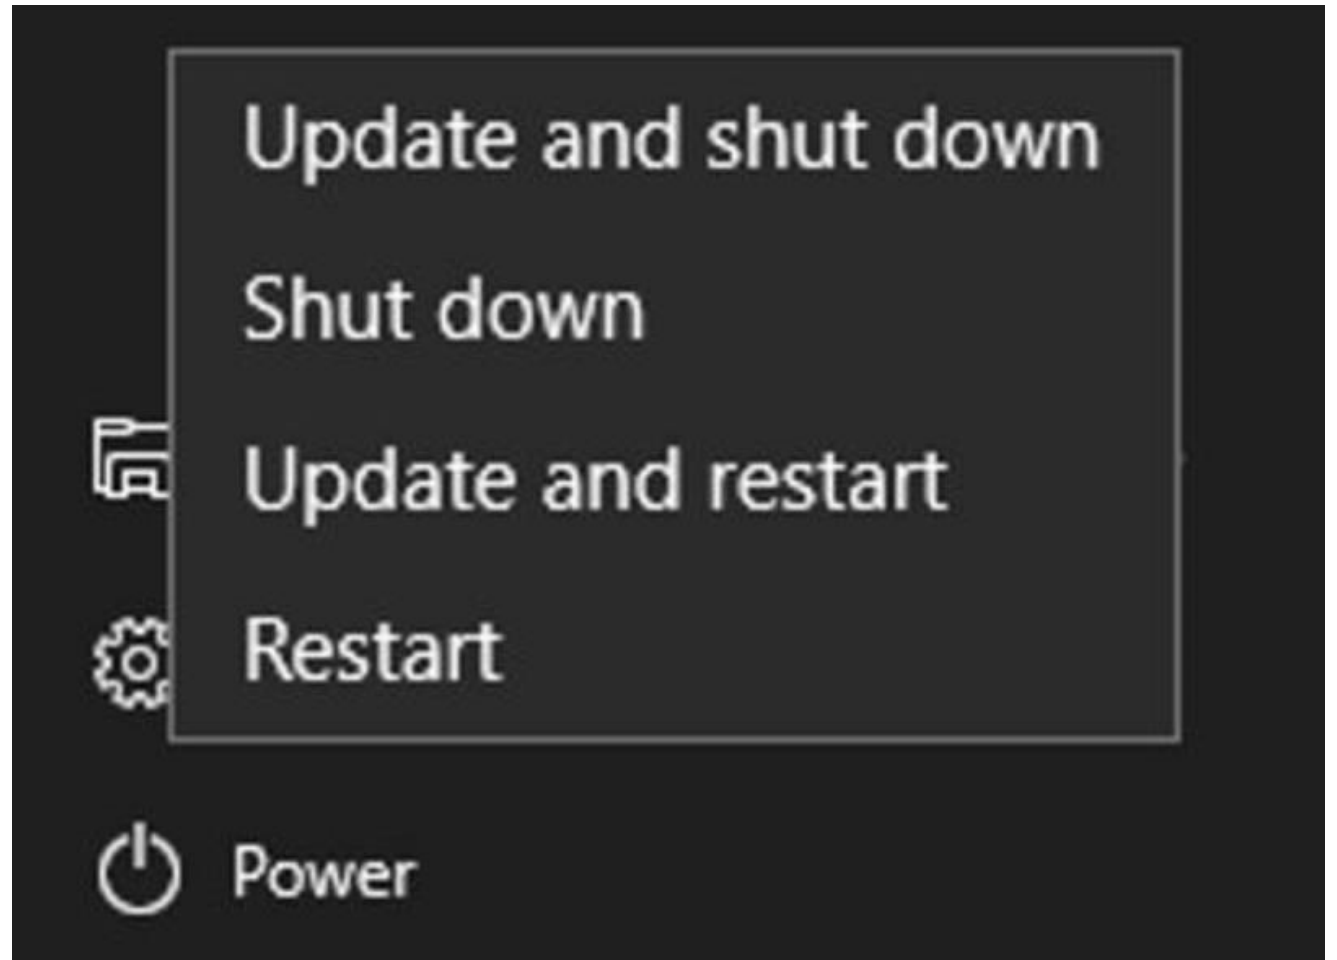

- Online: PC checks for available feature updates (manually or automatically)
- Feature update payload is downloaded
- User content is prepared for migration
- New operating system is placed into a temporary working directory
- PC waits for a required reboot to begin update installation

Once the IPU Task Sequence begins, the user cannot use their machine.

User Experience

- Allow users to control when to reboot or shutdown
- Allows Update and Reboot
- Allows Update and Shutdown

Simplicity

Less prone to failure
due to reduced
complexity

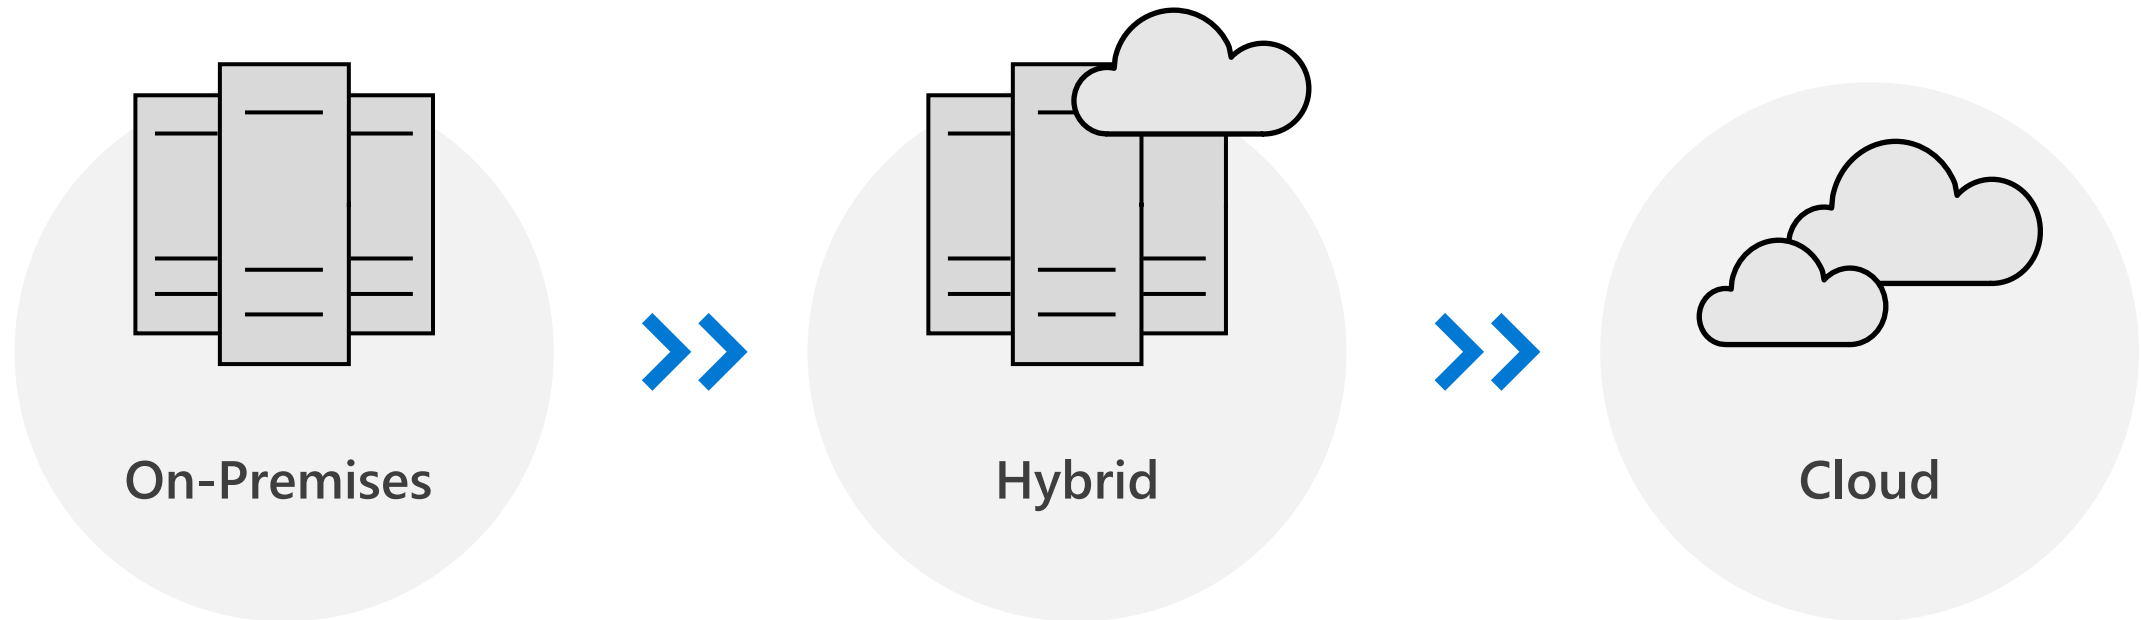

Easier to
troubleshoot

Easier Rollback

Be ready for modern management

Apply the same processes for all scenarios

- SCCM
- Co-management,
- Intune Managed

Sessions

	EDT (-4 UTC)	
Intro - @Julie Andreacola @Adam Gross	9:00-9:15	15 Minutes
How Can I Get Started? - Help me Toss the Task Sequence - How to start leveraging Feature Updates in your enterprise today and handle necessary customizations and drivers @Mike Marable @Chad Brower	9:15-9:45	30 minutes
